

Bootstraps

Get started with Bootstrap

Bootstrap is a powerful, feature-packed frontend toolkit. Build anything—from prototype to production—in minutes.

1. **Include Bootstrap's CSS and JS.** Place the `<link>` tag in the `<head>` for our CSS, and the `<script>` tag for our JavaScript bundle (including Popper for positioning dropdowns, poppers, and tooltips) before the closing `</body>`. Learn more about our [CDN links](#).

```
<!doctype html>
<html lang="en">
  <head>
    <meta charset="utf-8">
    <meta name="viewport" content="width=device-width, initial-scale=1">
    <title>Bootstrap demo</title>
    <link href="https://cdn.jsdelivr.net/npm/bootstrap@5.3.2/dist/css/bootstrap.min.css" rel="stylesheet">
  </head>
  <body>
    <h1>Hello, world!</h1>
    <script src="https://cdn.jsdelivr.net/npm/bootstrap@5.3.2/dist/js/bootstrap.bundle.min.js" rel="script">
  </body>
</html>
```

Navbar

Documentation and examples for Bootstrap's powerful, responsive navigation header, the navbar. Includes support for branding, navigation, and more, including support for our collapse plugin.

```
<nav class="navbar navbar-expand-lg bg-body-tertiary">
  <div class="container-fluid">
```

```

<a class="navbar-brand" href="#">Navbar</a>
<button class="navbar-toggler" type="button" data-bs-toggle="collapse" data-target="#navbarSupportedCollapse" data-bs-whatever="#"><span class="navbar-toggler-icon"></span>
</button>
<div class="collapse navbar-collapse" id="navbarSupportedCollapse">
  <ul class="navbar-nav me-auto mb-2 mb-lg-0">
    <li class="nav-item">
      <a class="nav-link active" aria-current="page" href="#">Home</a>
    </li>
    <li class="nav-item">
      <a class="nav-link" href="#">Link</a>
    </li>
    <li class="nav-item dropdown">
      <a class="nav-link dropdown-toggle" href="#" role="button" data-bs-toggle="dropdown">Dropdown
      </a>
      <ul class="dropdown-menu">
        <li><a class="dropdown-item" href="#">Action</a></li>
        <li><a class="dropdown-item" href="#">Another action</a></li>
        <li><hr class="dropdown-divider"></li>
        <li><a class="dropdown-item" href="#">Something else here</a></li>
      </ul>
    </li>
    <li class="nav-item">
      <a class="nav-link disabled" aria-disabled="true">Disabled</a>
    </li>
  </ul>
  <form class="d-flex" role="search">
    <input class="form-control me-2" type="search" placeholder="Search">
    <button class="btn btn-outline-success" type="submit">Search</button>
  </form>
</div>
</div>
</nav>

```

Containers

Containers are a fundamental building block of Bootstrap that contain, pad, and align your content within a given device or viewport.

```
<!DOCTYPE html>
<html lang="en">
<head>
<meta charset="utf-8">
<meta name="viewport" content="width=device-width, initial-scale=1">
<title>Bootstrap Responsive Fixed-width Containers</title>
<link href="https://cdn.jsdelivr.net/npm/bootstrap@5.0.2/dist/css/bootstrap.min.css" rel="stylesheet">
<script src="https://cdn.jsdelivr.net/npm/bootstrap@5.0.2/dist/js/bootstrap.bundle.min.js" rel="script">
</head>
<body>
  <div class="container">
    <h1>This is a heading</h1>
    <p>This is a paragraph of text.</p>
    <p class="mt-3 text-info"><strong>Tip:</strong> Open the console for more details</p>
  </div>
</body>
</html>
```

Cards

Bootstrap's cards provide a flexible and extensible content container with multiple variants and options

```
<div class="card" style="width: 18rem;">
  
  <div class="card-body">
    <h5 class="card-title">Card title</h5>
    <p class="card-text">Some quick example text to build on the card content.
    <a href="#" class="btn btn-primary">Go somewhere</a>
```

```
</div>  
</div>
```
